ADAPT & STRIVE BYOD in the Community Permission Form

Since meeting off-campus for community and vocational skills is a key part of the ADAPT and STRIVE programs, we use BYOD in the community as appropriate to support instruction. Using student devices off-campus brings special considerations.

- Students will not have access to the GCPS wireless network in the community.
- Some apps or uses may therefore require use of a family's data, calling minutes, or texting plan.
- Student Internet access will not be filtered through the GCPS network to automatically block inappropriate content.
- Because data, calling, and texting plans differ greatly, and because our teachers' focus is on quality instruction, it is not feasible for teachers to track the amount of data, minutes, or text messages used in the community.
- Although school staff will take reasonable measures to protect student devices in the community, there may be additional risks of breakage or loss associated with using devices off-campus.

For these reasons, we require separate permission to use your student's BYOD device in the community. By signing below, you are agreeing to the following statement:

I give full permission for my student to use a personally-owned device while off campus in the community. I understand that school staff will not be tracking data, minutes, or text messages. I take full responsibility for tracking my student's usage on a regular basis.
